

addClassList

↳ helps in adding classname to element

removeClassList

↳ , , remove ' ' from ' '

ele.innerHTML → prints everything including HTML chars which is wrapped inside do.

ele.textContent → same as innerHTML, but will not print HTML tags

ele.innerText → prints only the text inside do, ignores anything else

If a element is hidden, then mouse events do not work on it
hack: opacity: 0 (hide)
↳: (show)

How webpage renders

1) browser has an engine → displays the files received

HTML X
doc. not understood

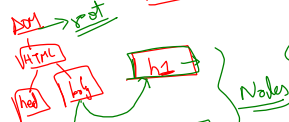

Browser Object
↳ powers of browser
↳ API

<h2> Hello </h2>

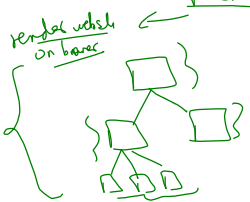

bytes → characters → tokens → meaningful data used to create DOM

HTML → browser

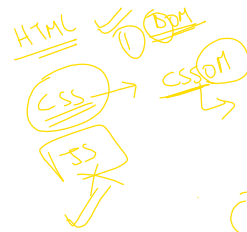

DOM tree is collection of Nodes

renders website

tokenization { hello , am bad boy

bytes → characters → tokens → Node

① + ② → render Tree
